## Scriptable Render Pipelines in Unity

#### GameDev Meetup #18 Kaunas 2018

#### Aras Pranckevičius

- Internal build systems engineer
  - What does that have to do with graphics?
    - Nothing! ...however

#### • At Unity since 2006

#### • Been doing graphics until 2017

• Still remember a thing or two... maybe

### Traditional render pipeline in Unity

- Forward or Deferred
- A whole bunch of options & knobs
- Shaders mostly customizable
- Render pipeline itself less so
- Black box, complex, fragile
- Still enables quite different games, so that's good :)

"Plumbing"

### **Typical Graphics Engine Pipeline**

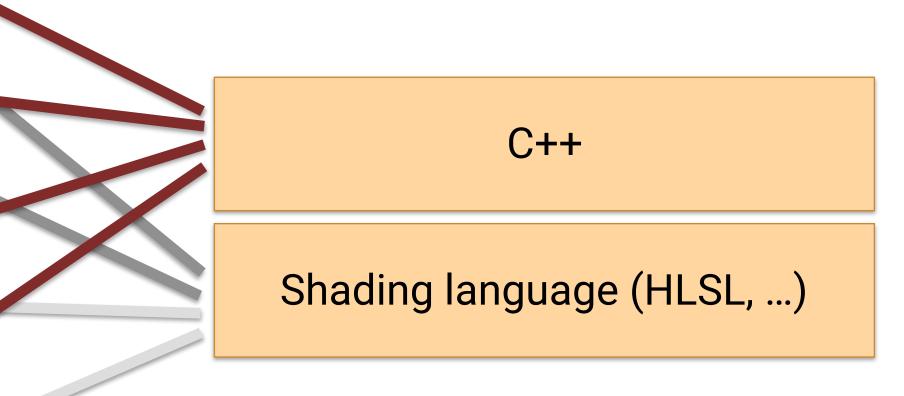

**Render Passes** 

**Engine Abstractions** 

**Graphics API Layers** 

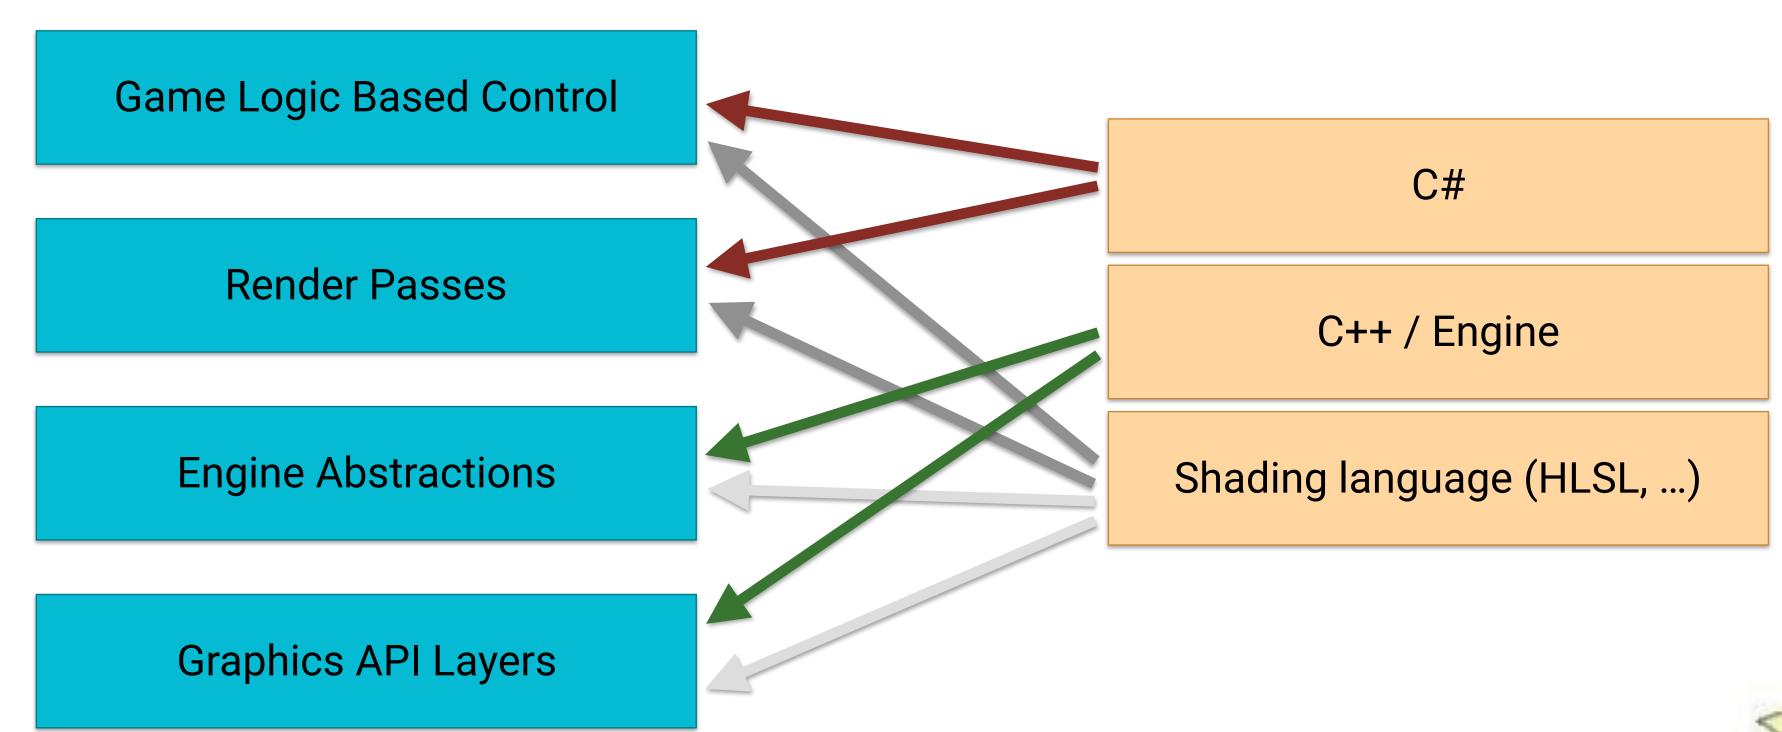

#### Our wishes

- Source code available
- Less black box & special cased
- More modern
- Performant

### Scriptable Render Pipelines! (SRP)

#### SRP Concept

- What to render: culling/filtering. World -> sets of objects • Render: draw sets of objects with some flags/params
- Setup render passes around all that
- Setup per-frame/renderpass data

<u>https://blogs.unity3d.com/2018/01/31/srp-overview/</u>

### SRP High/Low Level Split

- Perf-critical things (culling, drawing sets of objects, ...): C++
  - Might move to C#/Burst\* at some point
- Control/logic, render pass setup: C#
- GPU code (shaders, compute): HLSL
  - Maybe subset of C# at some point?

\* Unity Burst Compiler: LLVM-based compiler for a high performance subset of C# https://unity3d.com/unity/features/job-system-ECS

#### SRP Advantages

- Quick iteration of new algorithms
- All benefits of Unity engine/tooling
- Focus on algorithm, not busywork/plumbing
- Hot reload of C#/shader code

#### ms oling /ork/plumbing

### SRP Disadvantages (today)

- Needs new sets of shaders
  - Use ShaderGraph
  - Or write in HLSL
- Documentation is... a bit lacking :)
- If something needs native code tweaks/additions, it needs a new Unity release
- Not all the latest graphics features are exposed by Unity yet
  - Raytracing, conservative raster, bindless, ...
  - We're trying to catch up though

#### ng :) e tweaks/additions it needs a new

ures are exposed by Unity yet bindless, ...

#### Built-in SRP: Lightweight

- Simpler
- Runs on all platforms\*
- Optimized for mobile / VR
- Single pass forward renderer

\* At the very moment does not work on WebGL yet due to lack of threads/jobs

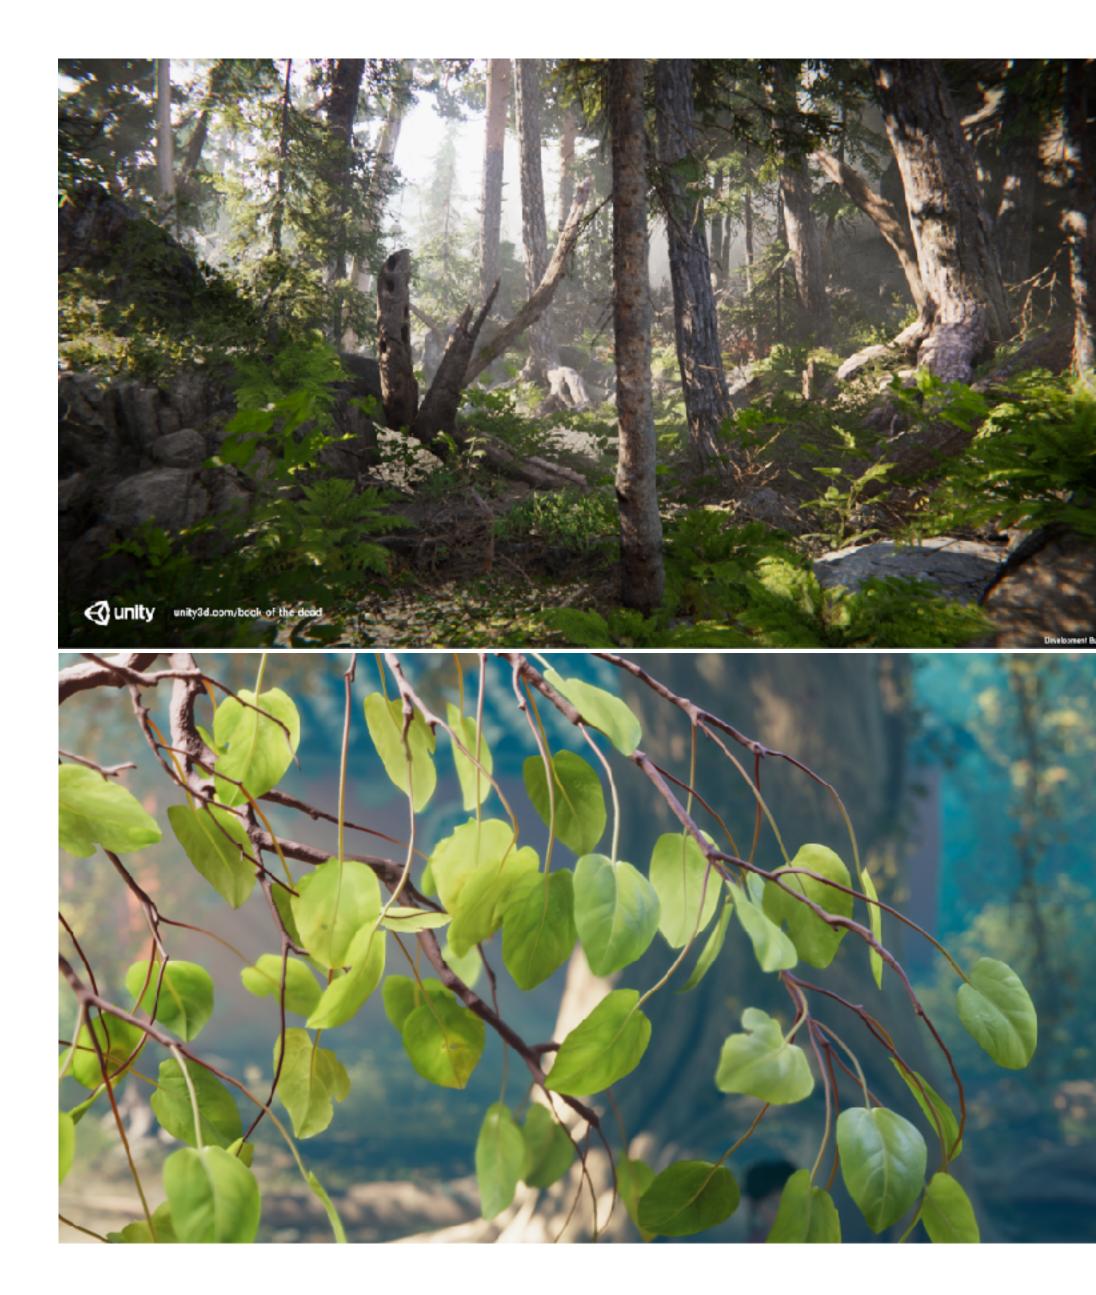

### **Built-in SRP: High-Definition**

#### • More features!

- Materials: SSS, Anisotropic, Clearcoat, Iridescent, Rough Refraction, Layered
- Lighting: Area lights, better probes, better shadows, volumetrics, ...
- Lots of debug views
- Requires compute (DX11 HW)
- Tile/Clustered Forward/Deferred
- "The Road toward Unified Rendering",

Lagarde @SIGGRAPH'18

 <u>http://advances.realtimerendering.com/s2018</u> 😴 unity

#### Built-in SRPs

- Full live source code of both LWRP & HDRP
  - <u>https://github.com/Unity-Technologies/ScriptableRenderPipeline</u>
- Look at how things are done!
- Extend, simplify or modify them!

### Modifying built-in SRPs

- "Customizing a production pipeline", Lira @SIGGRAPH'18
  - <u>https://www.slideshare.net/PhilLira1/customizing-a-production-</u> pipeline-110018900
- "Boat Attack" sample project
  - <u>https://github.com/Verasl/BoatAttack/</u>

### Build your own SRP!

- "Render Pipeline From Scratch", Bastian @SIGGRAPH 2018 <u>Slides.pdf</u>
  - <u>https://github.com/pbbastian/SRPFromScratch</u>

<u>https://github.com/pbbastian/SRPFromScratch/blob/master/</u>
